

Target aicut-story-episode

No malicious behavior observed

We ran it 1 time, with a normal setup. It contacted registry.npmjs.org and www.aicut.pro. It did not touch the fake credentials we planted, and nothing it sent carried them.

Recommendation	Confidence	Findings
No action needed	n/a	0 high 0 med 3 info

Nothing observed calls for action. This is evidence, not a guarantee.

Scope

Package	ai-cut-story-episode
Source	clawhub
SHA-256	d22440d482daf2387d36736068e9462b674e4841f0acf0fdf33bec9374b316b0
Files	5
Scanned	26 Oct 2026, 19:11 UTC
Engine	detonator 0.5.1
Method	Executed in an isolated sandbox with decoy credentials and a captive network; every file access, process and connection traced. 1 runs: baseline.
Note	batch:clawhub:2026-10-26

Findings summary

ID	Severity	Confidence	Finding
F01	Low	Info	Used the planted login with its own service (registry.npmjs.org)
F02	Low	Info	Network destinations contacted
F03	Low	Info	A tool read its own credentials (e.g. gh, aws, ssh)

Observed behavior

Install step	none
Runs as	node --version; npm --version; node /usr/bin/npm --version; npm i -g aicut-cli; node /usr/bin/npm i -g aicut-cli; tail -20
Network	registry.npmjs.org (11 conn, 2808 B sent; while running) www.aicut.pro (1 conn, 76 B sent; while running)

Credentials	~/ .npmrc (own tool, normal)
Files written	nothing outside its own folder

Finding details

F01 Used the planted login with its own service (registry.npmjs.org)

Severity: Low Confidence: Info Observed in: llm:baseline

A planted login went to the service it belongs to, as normal authentication (npm sending its token to registry.npmjs.org while installing).

Description

A planted login was sent to the service it belongs to, only as the Authorization header of ordinary requests: for example npm sending the ~/ .npmrc token to registry.npmjs.org while installing dependencies.

Impact

None in itself: this is how the package manager authenticates. Publishing, unpublishing or creating tokens with it would be reported as exfiltration.

Evidence

```
~/ .npmrc (npm) sent only as the login header of ordinary requests (no publish)
```

Remediation

No action needed.

F02 Network destinations contacted

Severity: Low Confidence: Info Observed in: llm:baseline

The package connected to these hosts.

Description

Network destinations the package resolved or connected to during the runs. All traffic was captured by the sandbox; nothing reached the internet.

Impact

Context only. Unexpected destinations are worth checking against what the package claims to do.

Evidence

```
registry.npmjs.org
```

```
www.aicut.pro
```

Remediation

Confirm each host is expected (the package's API, its registry). Allowlist expected egress in production.

F03

A tool read its own credentials (e.g. gh, aws, ssh)

Severity: Low Confidence: Info Observed in: llm:baseline
A tool opened its own login or config file, such as npm reading ~/.npmrc.

Description

A tool opened its own configuration or login file, such as npm reading ~/.npmrc or gh reading its hosts file.

Impact

None in itself: this is how those tools work. Listed so the report shows every credential access.

Evidence

```
~/.npmrc (by npm)
```

Remediation

No action needed.

Run log

llm:baseline ok 63.5s

new behavior: dns:registry.npmjs.org, dns:www.aicut.pro, exec:curl, ownread:~/.npmrc,
write:~/.npm/_cacache/content-v2/sha512/16/e8/* | 8 model steps, 8 commands

Observed behavior only. A clean result does not prove a package is safe. Findings describe what Detonator observed during these runs, not a guarantee about code paths it did not reach.
