

Target aimegeo-citation-monitor

No malicious behavior observed

We ran it 8 times, with a normal setup, LC_MESSAGES set, docs:--input examples/success/six-questions.json --before, the clock moved a year ahead and ANDROID_DATA and APPENGINE_RUNTIME and CURL_CA_BUNDLE and DEB_PYTHON_INSTALL_LAYOUT... set. It made no network connections. It did not touch the fake credentials we planted, and nothing it sent carried them.

Observed behavior only. A clean result does not prove a package is safe. Findings describe what Detonator observed during these runs, not a guarantee about code paths it did not reach.
