

Target mochi-csv-workbench

No malicious behavior observed

We ran it 8 times, with a normal setup, WATCH_REPORT_DEPENDENCIES set, the clock moved a year ahead and CURL_CA_BUNDLE and DENO_CERT and GIT_SSL_CAINFO and NODE_TEST_CONTEXT... set. It made no network connections. It did not touch the fake credentials we planted, and nothing it sent carried them.

Observed behavior only. A clean result does not prove a package is safe. Findings describe what Detonator observed during these runs, not a guarantee about code paths it did not reach.
